

# Wine or Leaving Windows Behind? Bring your apps with you!

Dan Kegel

Cebit 2009

Very hyperlinked presentation online at [www.kegel.com/cebit](http://www.kegel.com/cebit)

The opinions expressed in this talk are my own, and not those of my employer

Pay attention, there will be a quiz at the end

The world is changing...

Linux spreading beyond servers

The world fell in love with Windows in  
1995...

The HP Mini 1000 Mi Edition:

SIMPLIFY  
YOUR LIFE

But now **HP** uses **Ubuntu Linux** on the \$280  
Mini Mi netbook

**DELL + UBUNTU  
NOW THE CHOICE  
IS YOURS**

One of the most popular open source Operating Systems is now available through Dell - power your options and your system with ubuntu.

 FLUENDO  
 **ubuntu**

And Dell **uses Ubuntu Linux** on the  
\$250 **Mini 9n netbook**

Why did Dell and HP choose Linux?  
Isn't it **geeky and hard to use**?

Windows Vista doesn't fit on most netbooks

Windows costs netbook vendors \$20-\$50 per unit  
which hurts their bottom line

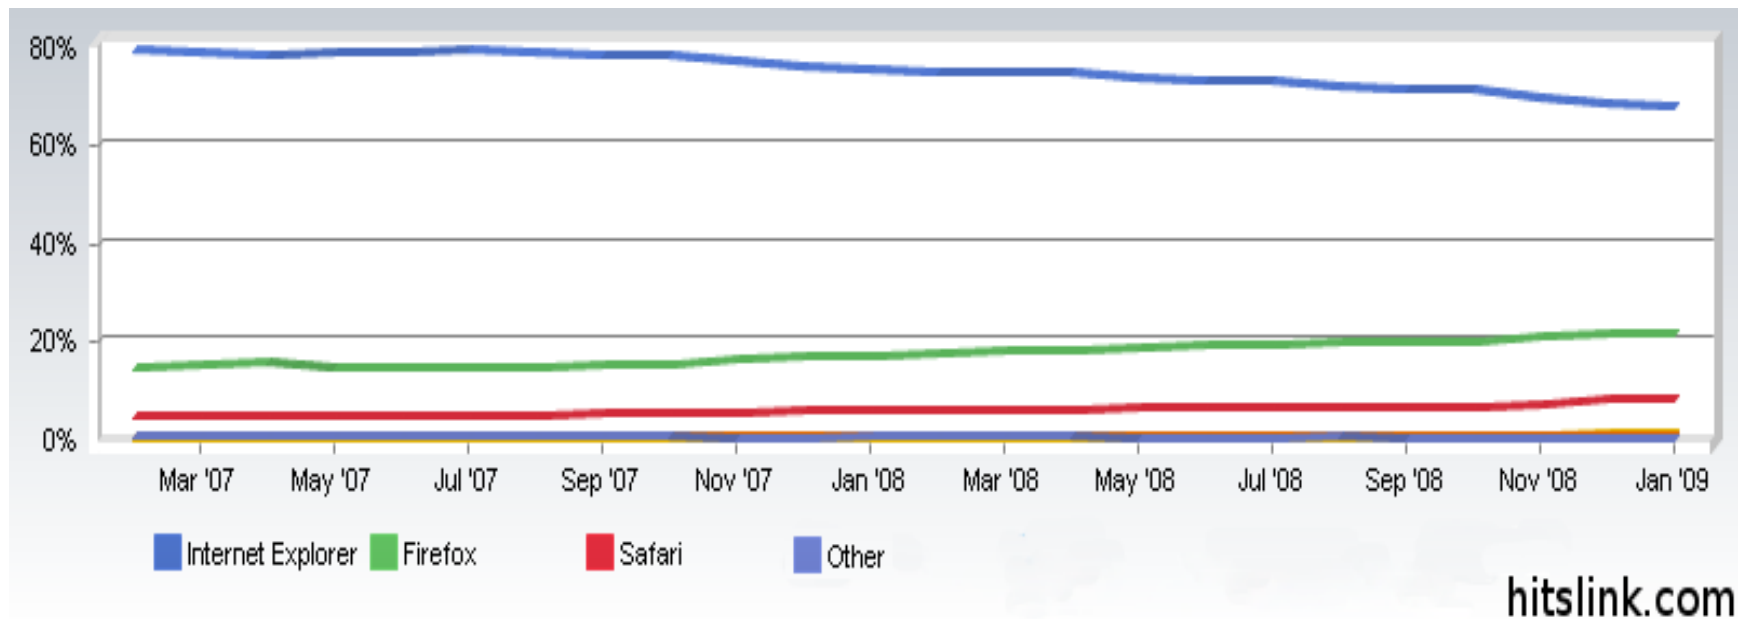

Microsoft limits Windows netbooks to

1GB RAM, 1GHz CPU

10.2" Screen, no DirectX 10

to protect sales of more expensive computers

Windows-only websites used to be common,  
but Firefox and Webkit are making that rare

# ubuntu

linux for human beings

Linux now easy to use  
thanks to vendors like [Ubuntu](#)

Linux now comes with a capable  
free office suite

But why should *you* try Linux?

Linux comes with thousands of apps  
and free updates

You're free to install Linux  
wherever and whenever you like

You're even encouraged to share  
Linux with your friends

Any programmer in the world can  
fix or improve Linux

Linux upgrades never forced  
New versions of Ubuntu always free

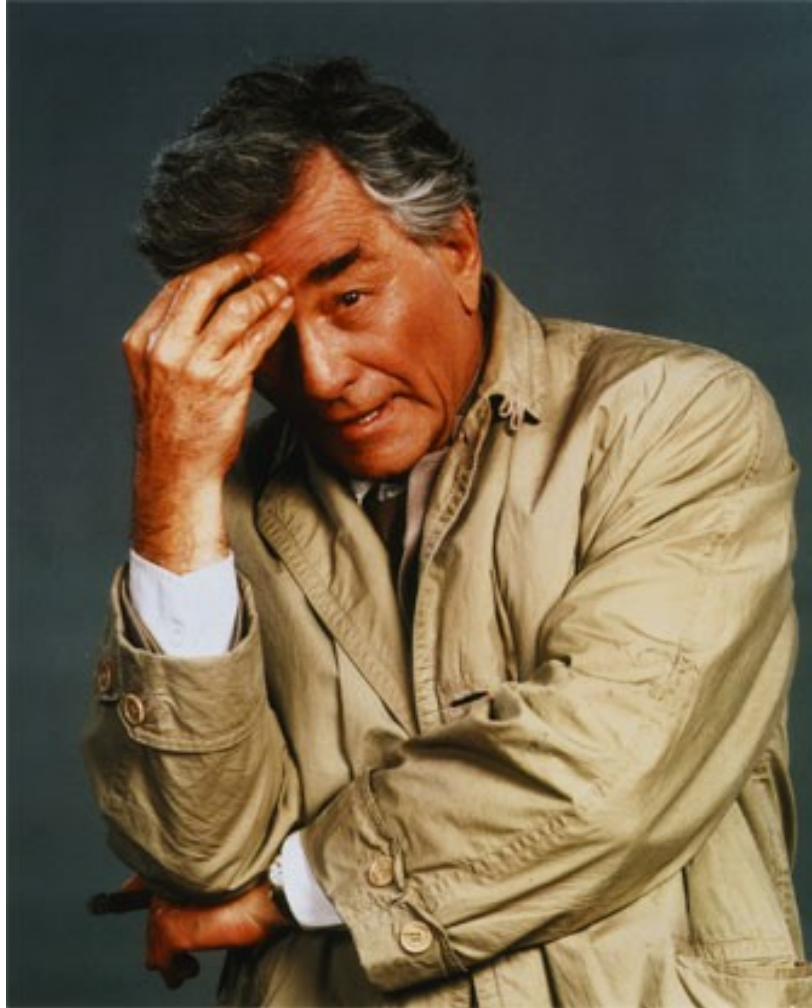

Linux has ~1% as many viruses

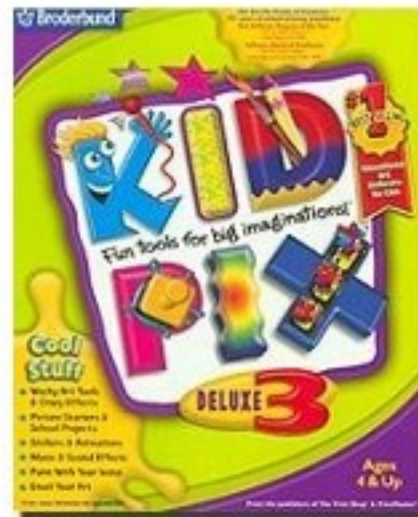

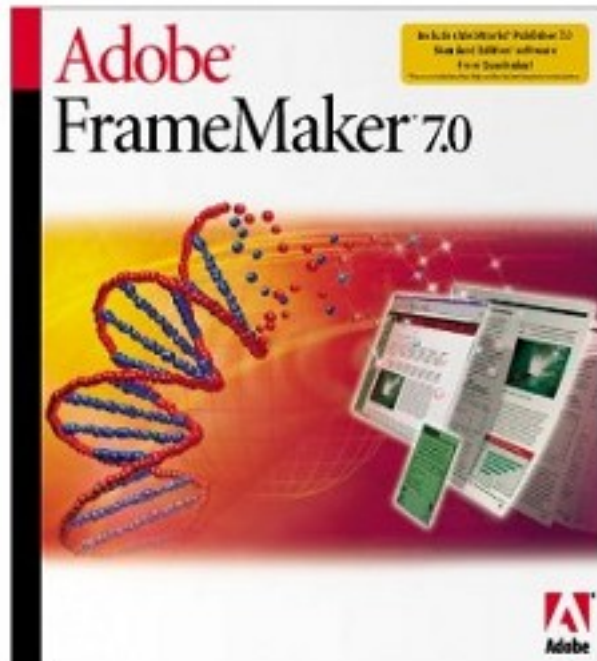

Munich, Niedersachsen, France, Spain,  
China, Russia, Brazil  
are using desktop Linux

Reasons: flexibility, independence, cost

OK, I'm convinced, I should try Linux.  
But there's just one more thing:

I need this one app, can I take it with me?

You could use VMWare and Windows,  
but then you still have to deal with Windows  
licensing and upgrades

Linux cloned Unix  
Can't we clone Windows, too?

Under construction

See [html presentation](#) for rest
